

Clinic Management Made Easy.

Clinic Ace is web based software designed to go beyond just the clinic management side of your business. It's designed to create an efficient, patient focused environment to keep your team on the same page with success and failure, while you manage your clinic, staff, contractors, patient satisfaction and new patient intake through comprehensive, real time reporting.

Clinic Ace is the next evolutionary step in clinic efficiency as it's customizable by you, tailoring itself to your needs and growing with you as you strive to create and maintain your practice.

REVOLUTIONARY CLINIC MANAGEMENT

That's Clinic Ace.

Securely Manage Information In One Place

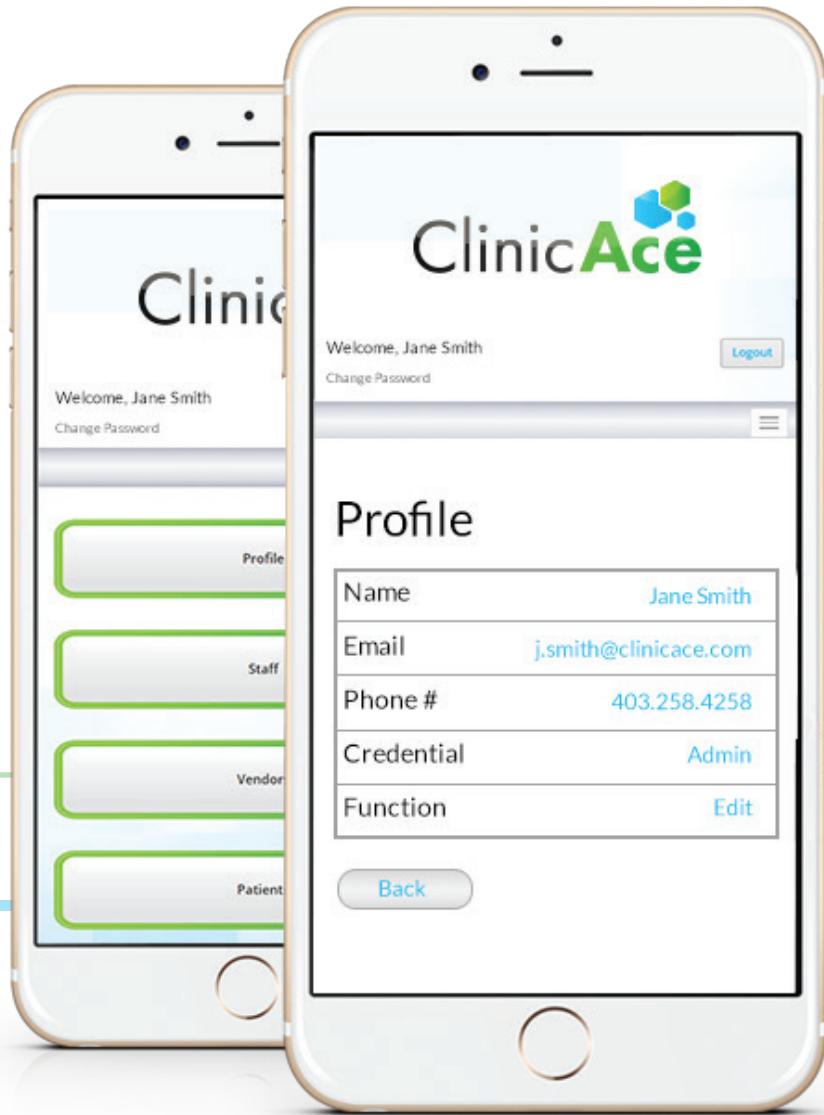

Whether you're managing one location or several, Clinic Ace is always working, calculating and providing you with up to date, real time information about your clinic.

Our secure HIPAA compliant software provides you with the peace of mind of knowing you can securely access any information remotely, providing your staff or contractors with the ability to complete their work whether onsite or offsite. With one button shutdown privileges and transparent individual secure login tracking, you'll know your clinic is being managed properly.

Seamless Sync Across All Devices

Unlike traditional clinic based software, Clinic Ace is always working to help ensure your team is on the same page with all aspects of the business that their security access grants them privilege to see. Whether staff book an appointment from the front desk, from their cell phone while taking a call or a contractor books an event from their tablet while waiting on a patient, the information will be updated on all devices immediately.

Additional Features Unique To Clinic Ace

The unique tile based design of Clinic Ace maintains security for staff, contractors and patients with ease. Our software gives our clients the ability to turn on and off functionality for staff based on their needs, ensuring that each individual accessing the software only sees what they need to see to do their job.

While this is a great security feature, it's also an efficiency application as individuals accessing the software never feel overwhelmed or have to go looking for information. Everything they need will be in the tile that represents their position, accessible in the order in which they need to do their job.

Security & Profile Management

Clinic Ace data is encrypted, ensuring proper management and security of patient data entered into the software. In addition, Clinic Ace also allows our clients to set their own security settings for staff, contractors and patients which is easily revocable. Each individual accessing the software is provided with a profile which tracks all HR documents and internal workings of the software related to that individual.

Our secure archive functionality ensures no clinic will ever need to worry about information going missing, as all patient, staff and contractor information is stored in one convenient and secure location.

Available On All Devices

With Clinic Ace there's no program to install on your computer, no need for ongoing IT Support and no need to have specific computers or devices to manage your clinic. Clinic Ace is a secure, web based platform designed to work on all devices able to access the internet.

Book A Demo

Clinic Ace was developed in collaboration with clinicians who struggled with the current solutions available. While many solutions offered the robust ability to be accessible anywhere, the challenge was that the software still worked the same as older solutions, challenging to use with applications that still didn't do everything that was needed.

The goal of Clinic Ace is to ensure that the strategic patient path that our clients designated was followed, and that functionality was clearly broken out so the software could literally guide staff, training them on proper procedures and delivering real results.
